The claims 1-20 are allowed.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to detection of shadows in an image and, more particularly, to the detection of shadows in single, static images.

Based on applicant's amendment, with respect to claim 1 representing claims 19 and 20, the closest prior art of record (Paragios and Christopher Jaynes). Paragios reference is directed to video analysis and, more specifically, to a system and method for video analysis techniques so as to automatically screen video streams to identify events of interest, and Christopher Jaynes reference is directed to dynamic shadow removal from front projection displays, but do not teach or suggest, among other things, " modeling the image as a reliable lattice having node reliabilities and link reliabilities with respect to pixel shadow status classification, determining a relationship between the reliable lattice model of the image and an Markov Random Field model to detect likely shadow regions of the image and applying region level verification to the detected likely shadow regions in the image to detect false positive shadow regions in the image, also storing identifications of detected shadow regions in the image".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Paragios and Christopher Jaynes).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
